

Chi-Heng (Henry) Lin

Atlanta, Georgia | 413-362-2903 | clin354@gatech.edu

Education

Georgia Institute of Technology, Atlanta, GA

09/2017 - present

Ph.D. in Electrical and Computer Engineering

GPA: 4.0/4.0. Selected Courses: advanced digital signal processing, Machine learning theory, nonlinear optimization

Columbia University, New York, NY

09/2015 - 12/2016

M.A. in Statistics

GPA: 4.0/4.0. Selected Courses: financial engineering, game theory, probability theory, information theory

National Taiwan University (NTU), Taipei, Taiwan

09/2007 - 06/2013

B.S. & M.S. in Electrical Engineering

GPA: 3.8/4.0. Selected Courses: real analysis, communication theory, advanced calculus, stochastic processes

Research Projects

Understanding the role of data augmentations in self-supervised learning, Neural Data Science Lab, Georgia Tech

- Analyze the behavior of the mitigation of double descent phenomenon with data augmentation
- Application to the development of good augmentations in self-supervised learning methodologies

Optimal transport for interpretable data alignment, Neural Data Science Lab, Georgia Tech

- Develop low-rank distribution alignment method for data analysis
- Application to domain adaptation and neural data analysis

Theoretical analysis on momentum acceleration of neural networks, Machine Learning Theory Group, Georgia Tech

- Analyze Polyak's momentum on neural network training
- Application to modern deep learning models

Bayesian Optimization for Modular Black-box Systems with Switching Costs, Neural Data Science Lab, Georgia Tech

- Design fast hyperparameter tuning algorithm leveraging modular structure information.
- Application to large scale multi-stage neuroimaging pipeline

Publications

Under Review:

[1] Mehdi Azabou, Mohammad Gheshlaghi Azar, Ran Liu, Chi-Heng Lin, Erik Christopher Johnson, Kiran Bhaskaran Nair, Max Dabagia, Bernardo Avila Pires, Lindsey Kitchell, Keith B Hengen, William Gray-Roncal, Michal Valko, Eva L Dyer. Mine your Own View: self-supervised learning through across-sample prediction. *Submitted to NeurIPS 2022*.

[2] Ran Liu, Mehdi Azabou, Max Dabagia, Chi-Heng Lin, Mohammad Gheshlaghi Azar, Keith B Hengen, Michal Valko, Eva L Dyer. Drop, swap, and generate: a self-supervised approach for generating neural activity. *Submitted to NeurIPS 2022*.

Accepted:

[1] Chi-Heng Lin, Mehdi Azabou, Eva L Dyer. Making transport more robust and interpretable by moving data through a small number of anchor points. *ICML 2021*.

Miscellaneous

Honors and Awards:

IDEaS-TRIAD Research Scholarship, Georgia Tech,
Davis Award (two times), Department of Statistics in Columbia University,
Scholarship to Study Abroad, Taiwan Ministry of Education
Presidential Award, Electrical Engineering in National Taiwan University

Skills:

Languages:
Chinese (native), English (full professional proficiency)
Programmings:
C/C++, R, Python, MATLAB, Wolfram Mathematica
