
CHI-HENG (HENRY) LIN

Atlanta, Georgia • 413-362-2903 • clin354@gatech.edu

 chihenglin.com

ECE PhD student @ GeorgiaTech

Education

- 09/2017 - present Ph.D. in Electrical and Computer Engineering. Advisor: Eva L. Dyer
Georgia Institute of Technology, Atlanta, GA
GPA: 4, Selected Courses: Advanced digital signal processing, Machine learning theory, Nonlinear optimization
- 09/2015 - 12/2016 M.A. in Statistics.
Columbia University, New York, NY
GPA: 4, Selected Courses: Financial engineering, Game theory, Probability theory, Information theory
- 09/2007 - 06/2013 B.S. & M.S. in Electrical Engineering
National Taiwan University (NTU), Taipei, Taiwan
GPA: 3.8, Selected Courses: Real analysis, Communication theory, Advanced calculus, Stochastic processes

Research Projects

Understanding the Implicit Regularization with Data Augmentations, Neural Data Science Lab, Georgia Tech

- Characterized the bias and variance of generalization error in linear regression with various data augmentations.
- Systematically analyzed the implicit regularization arisen from data augmentation's bias and covariance operator.
- Empirical studies on augmentations in neural network training using the neural spike train and 1-d MNIST dataset.

Analyzing the Representations with Mined Views in Self-Supervised Learning, Neural Data Science Lab, Georgia Tech

- Analyzed the mechanism behind boosting representation learning from similar data in the feature space.
- Extended the SSL framework of BYOL's applicability to scenarios where efficient data augmentation is unknown/scarce.
- Applied the algorithm Mine Your Own view to CIFAR, ImageNet dataset, and neuro data from the primate brain.

Optimal Transport for Interpretable Data Alignment, Neural Data Science Lab, Georgia Tech

- Developed a low-rank distribution alignment method using the concept of unsupervised hierarchical optimal transport.
- Applied to GMM models, domain adaptations of USPS/MNIST, and MNIST/MNIST with drop-out augmentations.
- Derived the geometric properties of the proposed latent Wasserstein discrepancy and provided an optimal cost guarantee.

Theoretical Analysis on the Neural Network Training, Machine Learning Theory Group, Georgia Tech

- Proved Polyak's momentum acceleration on convex functions, deep linear networks, and two-layer ReLU networks.
- Characterized the nonasymptotic convergent rate as functions of condition number with a compact modular analysis.

Bayesian Optimization for Modular Black-box Systems with Switching Costs, Neural Data Science Lab, Georgia Tech

- Designed a cost-efficient hyperparameter tuning algorithm for a modular pipelined system using a novel combination of Bayesian optimization and a slowly moving bandit algorithm, and proved the asymptotic optimality in augmented regret.
- Applied to 3D image reconstruction in a neuroimaging task consisting of a U-Net and multiple data processing stages.

Honors and Awards

Oct 2020	IDEaS-TRIAD Research Scholarship - Georgia Tech
Jan, Jun 2016	Davis Fellowships (two times) - Department of Statistics in Columbia University
Aug 2017	Scholarship to Study Abroad - Taiwan Ministry of Education
Aug 2017	M&H Bourne Fellowship - ECE Department in Georgia Tech
Aug 2010	Presidential Award - EE Department in National Taiwan University

Work Experience

Jan 2016 - Jul 2016	Research Assistant <i>Academia Sinica</i> Project Title: Development of a multi-view 3D video broadcast protocol. Accomplishment: Published "Efficient Error-Resilient Multicasting for Multi-View 3D Videos in Wireless Networks" in <i>IEEE GLOBECOM 2016</i> .
---------------------	--

Skills

Programming Languages / Packages: R, SQL, Python, Pytorch, MATLAB, Wolfram Mathematica, LaTeX

Speaking Languages: Chinese (native), English (full professional proficiency)
